# Utility Token

## BHAT-c1fde3

While the BH Network marketplace will include the ability to use other cryptocurrencies, the BHAT utility token will serve both as a method of purchase for digital services and goods, while allowing holders to gain extra benefits.

For example, marketplace fees can be dramatically reduced; sometimes down to zero, providing widespread governance and voting privileges on changes and upgrades on many aspects of the BH Network platform, exclusive participation in future projects and events, and providing economical drive to create necessary changes for the benefit of freelancers and their customers.

# Community Asset

**BH Agents**

BH Network will increase utility through the sale of our own NFT collection. Purchasing the BH Network NFTs will provide the holders with access to premium benefits. Those benefits will include but are not limited to: BHAT token airdrops, zero percent marketplace fees for a set time, online and offline event discounts, forum badges, and access to future projects and partners.

The level of benefit will change based on NFT rarity, but all levels of the asset are specifically designed to further enhance the experience of freelancing for both buyers and sellers on the BH Network marketplace.

# FREELANCE
## Marketplace

# topIQs

Current freelancing marketplaces are limited to fiat, which, when taken at face value, pose no issues. However, as a freelancer or customer, there are many pain points that arise. Freelancers face many challenges while trying to earn a living, such as huge fees, fraudulent chargebacks, extended payment release times, and platform-favored sellers pushing newcomers to the bottom of the pile.

Using blockchain technology, BH Network can resolve these issues and provide a cheaper, safer, faster, and fairer marketplace for the global freelancing economy of ~1.1 billion people and their customers.

Multivers✕

BH Network understands the importance of early visibility and gaining capital for new projects to continue growing and building a product that will benefit thousands, millions, or even billions of people. Furthermore, the team members also understand that investor security is of the highest priority.

Creating a launchpad gives BH Network the opportunity to give extra back to the community through the knowledge and experience that the team already has, and has gained through building a fully regulated business within the cryptocurrency space, by hand-picking high-quality projects, and giving people a safe route to be early-stage investors.

While regulations are not currently overly stringent, in the future, we are going to see stricter regulations placed on buying and selling Non-Fungible Tokens. BH Network wants to be one step ahead.

As with our Project Lauchpad, BH Network wants to provide NFT creators and collectors a place to ensure visibility and security through hand-picking NFT projects who are willing to work with the current and ever-changing cryptocurrency and NFT regulations such as KYC and AML requirements and allowing collectors to buy in confidence.

**Startups**

Having a launchpad is a great way to provide projects with extra visibility. However, to take some of the best projects, both DeFi and NFT, to the next level, BH Network will offer an incubator to help them through every stage of development.

We will provide day-one services, guiding some of the most influential and disruptive projects through the most challenging startup areas such as; regulation compliance, fundraising, infrastructure and networking, and governance - all areas we have significant experience in.
